

Norton Utilities Ultimate

A cleaner and better performing PC

Enhanced PC performance, increased storage space, and greater online privacy

With Norton Utilities Ultimate, you can speed up your Windows PC and free up valuable storage space by removing unneeded apps, programs, and leftover data. Automated PC cleaning and optimization help keep your PC healthy and better performing without having to think about maintenance tasks. You will also enjoy increased online privacy through the removal of temporary browser files and cookies that advertisers can use to track your behavior.

Features

Stop programs that slow down your Windows PC

Turn off programs that run automatically in the background to stop them from slowing down your PC at startup and impacting the speed and performance of your daily tasks.

Remove junk files that clutter up your Windows PC

Over time, your Windows system and the apps you use generate obsolete and useless files that steal your disk space. You can get rid of this system junk, even those pesky leftover files that remain after you uninstall an app.

Make room for important apps, not bloatware

Identify unnecessary and unwanted software clogging up your Windows PC that you can easily uninstall to enjoy more space for the applications you actually use. You can use the Uninstall simulator to see what the impact would be on your PC if you were to uninstall a particular app.

Auto-clean your computer to always have enough space

Schedule regular Windows PC cleaning to automatically remove system junk and browser data. Set it up once according to your preferences, then relax knowing that we've got you covered, keeping your PC tidy.

Keep browsing history to yourself

Your browser keeps records of where you go and what you do online. Sometimes this can be useful, but it also takes up space on your hard drive and can put your online privacy at risk. By cleaning your browser data, you make it harder for others to track your online activity.

System Requirements

Norton Utilities Ultimate is available only on Windows 11, 10, 8.1, 8, or 7 (both the 32 and 64-bit versions, excluding Windows on Arm, in S mode, Mixed Reality, Mobile, IoT, Starter, and RT editions).

For detailed system requirements information: [Norton.com/sysreq](https://www.norton.com/sysreq).
